NYU

12th grade

6th grade

Daniel Tang

Daniel has joined SR since his 6th grade, till 12th grade.

Note from Daniel Tang

Admitted to NYU—Honors College, Class of 2022
Majoring in Mechanical Engineering

It's really been quite a long time now. I feel like I've been at Storming my entire life. I remember day 1 trying to figure out how to copy code … and somehow failing. And I can very confidently say I won't be the same without Storming. Truly grateful for all the years I have been at Storming as I continue on to NYU. I'll definitely visit and keep in touch. Thank you again.

June 2019

An email from from Daniel during his Freshman year in college.

I've been taking intro to Matlab. Officially, the title is something about programming and problem solving. Point is, before we get to the fun graphing, cool modeling work and whatever that Matlab does, we first did the programming. This is where the whole problem solving in the title comes in. But basically, people have been struggling to do the homework problems while I've been breezing through.

I was wondering to myself why I was doing so well. Then I realized it's because of that C/C++ algorithms class at Storming Robots. Each problem set we get now is a lot like those old problems from SR's algorithms class. As a result, I've been having such an easy time. Thanks to the tips, tricks, and general logical thinking process I learned back then.

What I'm trying to say is that SR's Algorithms was the best class ever. It was super helpful. Thank you for teaching a class that I thought was ridiculously difficult.

Best,
Daniel
